a) Dry skin
b) Oily skin
c) Sensitive skin
d) Mature skin

Analysis: The correct answer is b) Oily skin. This question assesses basic knowledge of skin types, a fundamental area in skincare

assessments. Short Answer Question Example Question: Name three contraindications for performing facial treatments. Sample Answer: Active skin infections (e.g., cold sores, bacterial infections) Skin inflammation or severe acne outbreaks Recent laser or chemical peel treatments Allergic reactions to skincare products Contagious diseases Analysis: This tests understanding of client safety and treatment suitability, emphasizing the importance of thorough consultation. Extended Response Question Example Question: Describe the steps involved in conducting a client consultation prior to an eye treatment, including safety considerations. Sample Answer: A comprehensive client consultation for an eye treatment begins with greeting the client professionally and establishing rapport. The therapist should then ask about the client's medical history, including any eye conditions (e.g., glaucoma, conjunctivitis), allergies, or sensitivities. Visual assessment of the eye area is performed to identify contraindications such as infections, skin irritations, or recent surgeries. The therapist discusses the treatment plan, explaining the procedure, expected outcomes, and aftercare advice. Consent must be obtained, ensuring the client understands any risks involved. Throughout, safety considerations include maintaining hygiene, avoiding contact with sensitive or infected areas, and being prepared to manage any adverse reactions. Analysis: This answer demonstrates knowledge of procedural steps, safety protocols, and effective communication, which are vital for professional competence. Scenario-Based Question Example Question: A client has sensitive skin and reports recent use of exfoliating acids. How should you modify your eye treatment plan? Sample Response: Given the client's sensitive skin and recent use of exfoliating acids, I would first assess the skin's current condition. If signs of irritation or redness are present, I might postpone the treatment to allow recovery. If proceeding, I would select gentle, hypoallergenic products, avoid any abrasive techniques or harsh chemicals, and perform a patch test beforehand. I would also inform the client about potential sensitivities and advise on post-treatment care to minimize irritation. Throughout, I would monitor the skin's response and adjust the treatment accordingly.
