Diagrams and Calculations Include sketches or diagrams where appropriate. Show your working for measurement or calculation questions. Sample Answers and Tips for Common BCITO Carpentry Units Providing example responses can help clarify how to approach answering questions effectively.

Workplace Safety and Health Question: Describe the steps you would take to ensure a safe working environment on site. Sample Answer: "First, I would conduct a hazard assessment to identify potential risks. I would ensure all workers wear appropriate PPE, including helmets, gloves, and safety glasses. I would keep the work area clean and free of debris to prevent trips and falls. I would also verify that machinery and tools are in good working order and follow the site's safety protocols. In case of an emergency, I would know the location of fire exits and first aid kits, and ensure everyone is aware of emergency procedures."

Measuring, Marking, and Layout Question: Explain how to accurately mark out a wall frame on the ground. Sample Answer: "I would start by reviewing the plan drawings to identify the accurate measurements. Using a tape measure and a chalk line, I would mark the positions of the wall corners on the ground, ensuring these are aligned with the plan. I would use a framing square to check right angles at corners. I would double-check measurements from the reference points to confirm accuracy before proceeding with positioning the wall plates."

Framing and Structural Components Question: How do you ensure your wall frames are square? Sample Answer: "To ensure the wall frame is square, I would measure diagonally from corner to corner. The measurements should be equal; if not, I would adjust the position of the studs or plates accordingly. Using a carpenter's square at key points confirms right angles. I also ensure that all components are aligned using a spirit level and that the frame remains plumb throughout construction."
